

For each function find the following (if they exist).

- All asymptotes (vertical, horizontal, and slant) ... **BE SURE TO WRITE THEM AS AN EQUATION**
- Holes
- Intercepts ( $x$  and  $y$ )
- Sketch the graph without a calculator. Identify at least 3 plotted points per region

1.  $f(x) = \frac{x+5}{x-1}$

2.  $f(x) = \frac{-2}{x^2 - 2x - 3}$

3.  $f(x) = \frac{x^2 - x - 2}{x+1}$

4.  $f(x) = \frac{3x^2 - 5x - 2}{x^2 - 4}$

5.  $f(x) = \frac{x+1}{x^2 - 3x - 10}$

6.  $f(x) = \frac{x^2 - 3x - 4}{x - 3}$

7.  $f(x) = \frac{2x^2 + 5x + 3}{x^2 - 9}$
